The ESS Price Forecasting Report provides a five-year forecast for the price of a DC battery container, including battery cells, modules, racking, and additional balance of system needed for a containerized battery system. The Q1 2025 report covers pricing outlook updates through March 2025.

As of most recent estimates, the cost of a BESS by MW is between \$200,000 and \$450,000, varying by location, system size, and market conditions. This translates to around \$200 - \$450 per kWh, though in some markets, prices have dropped as low as \$150 per kWh. Key Factors Influencing BESS Prices.

Small-scale lithium-ion residential battery systems in the German market suggest that between 2014 and 2020, battery energy storage systems (BESS) prices fell by 71%, to USD 776/kWh. With their rapid cost declines, the role of BESS for stationary and transport applications is gaining prominence.

In 2025, the typical cost of a commercial lithium battery energy storage system, which includes the battery, battery management system (BMS), inverter (PCS), and installation, is in the following range: \$280 - \$580 per kWh (installed cost), though of course this will vary from region to region.

For large-scale, containerized ESS (e.g., 100 kWh and above), costs can drop to \$180 to \$320 per kWh, depending on system size, integration, and local market conditions. These numbers are affected by: Regional labor and

material costs Local grid policies or incentives Project scale and technical.
