

## Global PV Storage Insights

# Average LFP battery system price per 1MW in China

## Overview

---

According to a new Bloomberg report, the cost of LFP battery cells in China has fallen by 51 per cent to an average of \$53/kWh since 2023. That's remarkably lower than the average global rate in 2023 (\$95/kWh).

According to a new Bloomberg report, the cost of LFP battery cells in China has fallen by 51 per cent to an average of \$53/kWh since 2023. That's remarkably lower than the average global rate in 2023 (\$95/kWh).

Let's take a look to the average price of EV (Electric Vehicle) and ESS (Energy Storage System) battery cells in China. The EV battery cells are optimized for energy and power density, while ESS are mostly about cost, that's why they are a bit cheaper. Anyway, a good 60 kWh CTP (cell to pack).

According to a new Bloomberg report, the cost of LFP battery cells in China has fallen by 51 per cent to an average of \$53/kWh since 2023. That's remarkably lower than the average global rate in 2023 (\$95/kWh). Bloomberg attributes not one but three factors to the fast-falling and significantly low.

Over the last year, the price for lithium iron phosphate, or LFP, battery cells in China has dropped 51% to an average of \$53 per kilowatt-hour. The average global price of these batteries last year was \$95/kWh. There are several factors driving prices lower. The first is raw-material prices, which.

However, since 2023, a combination of factors has triggered a precipitous decline in LFP battery prices, exceeding 70%, sending shockwaves through the industry. Several factors have contributed to the plummeting LFP battery prices: Downward Trend in Upstream Raw Material Prices: Lithium carbonate.

The price of lithium-ion battery packs in China has been decreasing over the last two years, and was at its lowest in 2024. Lithium iron phosphate (LFP) batteries were the most affordable packs throughout the period under consideration, with prices at [Log in or register to access precise data](#). U.S.

Over the last year, the price for lithium iron phosphate (LFP) battery cells has dropped 51% to an average of \$53 per kilowatt-hour (kWh), compared to a

global average of \$95/kWh last year. This dramatic price decline is poised to drive substantial changes in the markets for electric vehicles (EVs). Is the LFP battery price decline a challenge to China's Lithium battery industry?

In conclusion, the LFP battery price decline presents a significant challenge to China's lithium battery industry chain. By carefully evaluating market conditions, implementing proactive measures, and prioritizing quality, buyers can navigate this dynamic landscape and emerge stronger.

How much does an LFP cell cost in China?

And I plugged some numbers earlier into the model from BloombergNEF and looking the difference between the US and China. So for a LFP cell produced in China, 35 gigawatt hour facility, you're looking at around \$68 per kilowatt-hour.

Why is battery cost so low in China?

That's remarkably lower than the average global rate in 2023 (\$95/kWh). Bloomberg attributes not one but three factors to the fast-falling and significantly low battery cost in China: declining raw-material prices, overcapacity, and shrinking margins. Raw material prices took a big hit in the last one and a half years.

How much are LFP battery cells worth a kilowatt-hour?

BloombergNEF put out a stat that I've heard cited like many times since then, a couple months ago that LFP battery cells in China on the spot market were selling for \$53 a kilowatt-hour. Just truly bananas cheap relative to what you would've expected even just a couple of years ago.

Are EV batteries cheaper in China?

In China, LFP battery packs now cost \$75/kWh, and at that level, companies can sell EVs at the same price as or even lower than combustion engine models. Nearly two-thirds of EVs in the country are already cheaper than their ICE counterparts. The decline in battery prices in China will eventually benefit consumers in the global markets as well.

How much does a cell cost in China?

So again, crazy low considering that 18 months ago the average price of a cell was about \$135 per kilowatt-hour. Now, you can get an entire storage system

in China. But again, even those spot markets in China getting to 35, sorry, the \$50 per kilowatt-hour, it's low in China. Some people can access that.

## Average LFP battery system price per 1MW in China

---

### Where will lithium-ion battery prices go in 2025?

"This is anticipated to support the prices of key battery materials--such as [lithium iron phosphate] LFP, li-ion battery copper foil, and electrolytes--thereby stabilizing ...

### Plummeting LFP Battery Prices: A Shakeup for ...

In conclusion, the LFP battery price decline presents a significant challenge to China's lithium battery industry chain. By carefully evaluating market conditions, implementing proactive measures, and ...

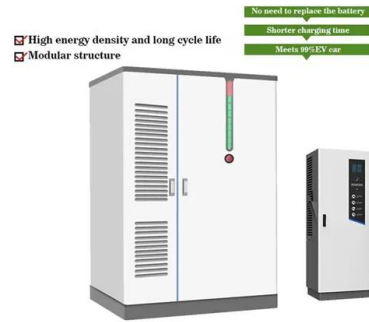

### How Lithium Battery Prices Are Changing In 2025

In 2025, the average lithium battery price per kilowatt-hour (kWh) continues to fall. Most industry forecasts place the global average between \$85 and \$100 per kWh, with some sources projecting even lower prices in high ...

### Lithium-Ion Battery Pack Prices See Largest Drop ...

New York, December 10, 2024 - Battery prices saw their biggest annual drop since 2017. Lithium-ion battery pack prices dropped 20% from 2023 to a record low of \$115 per kilowatt-

hour, according to analysis by research provider ...

## Unpacking China's cheap battery costs

So for a LFP cell produced in China, 35 gigawatt hour facility, you're looking at around \$68 per kilowatt-hour. So this isn't kind of optimized for these super low prices that we are seeing today, but assumes a LFP material ...

## In Conversation: How cheap can battery storage get?

While lithium iron phosphate (LFP) battery system prices were not expected to fall under the \$100/kWh threshold before 2030, the last couple of months have proven the ...

## China's Low-Cost Battery Push: Lithium-Ion Prices ...

Prices for lithium-ion batteries have consistently fallen while their performance continues to improve, fueling the rapid growth of electric vehicles (EVs) and grid-scale energy storage.

## Cost Projections for Utility-Scale Battery Storage: 2023 Update

Executive Summary In this work we describe the development of cost and performance projections for utility-scale lithium-ion battery systems, with a focus on 4-hour duration ...

## EV batteries now cost 115 USD per kWh on average

According to a recent analysis, the average price of lithium-ion battery packs for electric vehicles fell by 20 per cent to USD 115 per kilowatt hour in 2024 - the sharpest price drop since 2017. The USD 100/kWh mark could ...

## Grid-scale battery costs: \$/kW or \$/kWh?

Grid-scale battery costs can be measured in \$/kW or \$/kWh terms. Thinking in kW terms is more helpful for modelling grid resiliency. A good rule of thumb is that grid-scale lithium ion batteries will have 4-hours of storage ...

## Unpacking China's cheap battery costs

So this isn't kind of optimized for these super low prices that we are seeing today, but assumes a LFP material costs of about five bucks per kilowatt-hour. You compare that to manufacturing in the US.

## COST OF LARGE-SCALE BATTERY ENERGY STORAGE ...

Capital cost of utility-scale battery storage systems in the New Policies Scenario, 2017-2040 - Chart and data by the International Energy Agency. Free and paid data sets from across the ...
