When renewables supplied roughly 80% of Portugal's electricity in July 2025, prices in the wholesale market briefly slid below zero—great for generators selling excess electrons, confusing for consumers who still paid standard tariffs. Batteries smooth out those extremes, allowing energy to be.

As of most recent estimates, the cost of a BESS by MW is between \$200,000 and \$450,000, varying by location, system size, and market conditions. This translates to around \$200 - \$450 per kWh, though in some markets, prices have dropped as low as \$150 per kWh. Key Factors Influencing BESS Prices.

Around Q2/2024 the LFP cell prices in the Chinese domestic market dropped below \$60/kWh and it is now known that BYD are now driving this prices down to ~\$44/kWh by pressuring the supply chain as well as further utilizing their market position regarding scale and vertical integration. The Q4 2023.
