## Overview

---

We expect price differentials in Chile to fall as BESS-installed capacity grows and new transmission comes online adding more uncertainty to long term arbitrage revenues.

We expect price differentials in Chile to fall as BESS-installed capacity grows and new transmission comes online adding more uncertainty to long term arbitrage revenues.

Fitch Ratings-Sao Paulo/New York-01 April 2025: Project finance transactions in Chile are expected to increase due to the recent commissioning of large battery energy storage systems (BESS), Fitch Ratings says. This should balance electricity supply and demand while reducing price volatility for.

The price of natural gas in the residential sector decreased by 5% in 2024 to US\$12.5c/kWh. The trend has been upwards since 2017, although there have been some fluctuations, with a maximum at US\$13.2c/kWh in 2023. Electricity prices in residential have been rather stable since 2017 (US\$15c/kWh in.

Chile will need new renewable energy storage systems to replace its current backup capacity of coal-fired plants and natural gas-powered combined cycle turbines and improve the reliability of the country's electric grid as it pursues new renewable energy generation. Chile has the potential to run.

This momentum is reflected in the data: AMI estimates that there is a 7.7 GW pipeline of BESS projects in Chile, far and away the most advanced front of the meter (FTM) storage market in Latin America. 1 Only 505 MW of BESS projects are currently operational in the entire region. Nearly 2 GWh of.

Chile market report. Table of contents .

The global market for battery storage grew twofold y/y to exceed 90 GWh in 2023, according to data of the International Energy Agency, and the volume of battery storage in use rose to over 190 GWh. Underpinned by hefty supportive policies, BESS has proven to be resilient to supply chain disruptions. How many energy storage projects are in Chile?

Currently, 36 of the 129 large-scale projects Latin America projects with an energy storage component under development are in Chile, including 32 out of 71 of the region's early works projects. The storage technologies either in use or being considered include:

How much battery storage capacity does Chile have?

According to data from Acera, the Chilean Renewable Energy Association, there are only 64MW of battery storage capacity currently active, representing 0.2% of national capacity. AES Andes, a subsidiary of U.S. company AES Corp. operates all 64MW at their Angamos and Los Andes substations.

How much does a battery cost in Chile?

In fact, batteries charged at nearly \$0/MWh during the day in the sunny, northern desert regions of Chile, sell energy at night for over \$100/MWh. Although projects such as Engie's BESS Coya are already enjoying these large spreads, this capacity payment will partially de-risk Chile's dependence on volatile, but still profitable, merchant revenues.

How much electricity does Chile use per capita?

The country's electricity consumption per capita is around 4 MWh (3rd in South America). Chile's Energy Roadmap for 2050 targets a zero-emission power mix (mainly solar and wind) and a shift from private to public transportation which, according to the plan, should be low or non-carbon-emitting by 2050.

Are battery energy storage systems a viable alternative for Chilean power producers?

With transmission lines at overcapacity and permitting delays slowing the development of new grid infrastructure, battery energy storage systems (BESS) have surged as a profitable alternative for Chilean power producers.

Will new solar assets in Chile have storage components?

New utility-scale renewable and PMGE assets in Chile (most of which are distributed solar plants smaller than 9 MW) will likely all have storage components moving forward.

## Average commercial energy storage price per 5kW in Chile
