## Overview

Mexico's ambitious pursuit of clean energy hinges heavily on the utilization of solar and wind power. However, the intermittent nature of these sources poses a substantial challenge to grid stability. To address this challenge, energy storage emerges as a critical solution, serving to store surplus renewable.

Mexico's energy sector is currently undergoing a dynamic shift, driven by the integration of solar energy and energy storage solutions. The once-muted Mexico Energy.

After the administration of Andrés Manuel López Obrador (commonly abbreviated as AMLO) made it more challenging to buy and sell energy on the wholesale markets.

The Mexico Energy Storage Market accounted for \$XX Billion in 2023 and is anticipated to reach \$XX Billion by 2030, registering a CAGR of XX% from 2024 to 2030.

What promising potential do alternative energy storage technologies, such as flow batteries and hydrogen storage, hold for the future in Mexico, particularly in terms of offering longer discharge durations and potentially lower costs?

What promising potential do alternative energy storage technologies, such as flow batteries and hydrogen storage, hold for the future in Mexico, particularly in terms of offering longer discharge durations and potentially lower costs?

.

The regulatory landscape for energy storage in Mexico is still evolving, with a lack of clear and consistent regulations causing uncertainty for investors and developers. While supportive policies exist, access to financing remains a

hurdle for many projects, particularly smaller-scale.

In 2023 and the first half of 2024, the average price of natural gas used for power generation in Mexico, derived from Henry Hub and Waha prices, was approximately 2.38 USD/MMBTU. This relatively low-price environment helped to moderate electricity costs, despite the increased demand and.

Average gas prices dropped by 38% in 2023 to US\$1.6c/kWh for both industry and households (back to 2017 levels), after an 11% increase in 2022 and a doubling in 2021. Prices for industry are equivalent to those in the United States, but prices for households are 70% lower. Total energy consumption.

Compared to US storage capacity of 6 months, Mexico has 4 days on average. LPG is the only commodity in Mexico with storage capacity above 4 days (6 days) PEMEX sells extremely cheap fuel to CFE which is now replacing gas, at approximately \$1. We hoped Mexico was committed to going green but it.

Renewables accounted for 31% of the country's cumulative installed capacity of 102GW in 2022 (IRENA, 2023). Of the 31.9GW renewable installed capacity, hydropower accounted for the largest share (13.3GW), followed by solar PV (9.3GW) and onshore wind (7.3GW). Mexico has continued to slip as a.
