

## Global PV Storage Insights

# Average household energy storage price per 50kW in Switzerland

## Overview

---

Swissolar estimated the average price of battery storage systems at \$115 per kilowatt-hour in 2024, making them more affordable for homeowners.

Swissolar estimated the average price of battery storage systems at \$115 per kilowatt-hour in 2024, making them more affordable for homeowners.

Swissolar estimated the average price of battery storage systems at \$115 per kilowatt-hour in 2024, making them more affordable for homeowners. This cost reduction has spurred widespread adoption, allowing households to store surplus solar energy for use during low-sunlight periods, supporting.

A key reason for the popularity of home energy storage is a continuing decline in equipment prices which Swissolar estimated at \$115/kWh for 2024 (see chart below). The prices for battery storage have continued to fall in recent years. The analysis in the report refers to new storage capacity.

The average day-ahead electricity price of the last 7 days for the European countries shown here is shown. The trend arrow shows the development of the price compared to the average price of the last 10 periods. Electricity prices on the markets are an important indicator of the current market and.

However, the prices for electricity and gas do not directly result in the end consumer price that private and commercial customers pay to their local energy supply company. These end-customer prices depend, among other things, on the procurement strategy (long-term purchases or short-term purchases).

A key reason for the popularity of home energy storage is a continuing decline in equipment prices which Swissolar estimated at \$115/kWh for 2024. According to the Swiss Federal Office of Energy (SFOE), 41% of Swiss homeowners are considering residential batteries. The primary motivations include gaining independence from the grid (22%), countering rising electricity

costs (20%), and addressing environmental concerns (18%). The government. Why are energy prices important in Switzerland?

Swiss Federal Office of. [energiesuisse.ch](https://energiesuisse.ch): Energy prices on the markets are an important indicator of the current market and supply situation in Europe and Switzerland. Supply (production) is combined here with demand (consumption) and ultimately results in a price for a specific energy product. There are markets for different products.

What is the future of electricity storage in Switzerland?

One important pillar of this strategy is the further development of electricity storage capacity in Switzerland. In the next years, three large-scale pumped hydro storage power plants will be connected to the grid. The first, the Limmern pumped storage plant (1 GW), should become operational in 2016.

How much does electricity cost in Switzerland?

The residential electricity price in Switzerland is CHF 0.342 per kWh or USD 0.415. The electricity price for businesses is CHF 0.277 kWh or USD 0.336. These retail prices were collected in September 2024 and include the cost of power, distribution and transmission, and all taxes and fees. Compare Switzerland with 150 other countries.

Where can I find energy statistics for Switzerland?

The Swiss Federal Office of Energy compiles statistics concerning Switzerland's energy supply and consumption. You can either download the overall energy statistics for Switzerland, electricity statistics and sector statistics in PDF format, or order them in printed form from the BBL Online Shop.

How much energy does Switzerland use?

Despite a notable population increase of 28.7% between 1990 and 2020, energy consumption decreased by 5.9% during this period. The majority of energy consumed in Switzerland is derived from petroleum and motor fuels, accounting for 43% of the total, followed by electricity at 26%, and gas at 15%.

What data is used for electricity and gas prices?

These include electricity (power), gas, heating oil, diesel and petrol. Different

data are used for this purpose. For electricity and gas, data from the stock exchanges are used. In contrast to electricity prices, the data on gas prices are referenced to a base year, as licensing issues still need to be clarified.
