How much does energy cost in the Dominican Republic?

This profile provides a snapshot of the energy landscape of the Dominican Republic, a Caribbean nation that shares the island of Hispaniola with Haiti to the west. In 2014, the Dominican Republic's utility rates were approximately \$0.19 per kilowatt-hour (kWh),<sup>1</sup> below the regional average of \$0.33/kWh.

How much does a MWh system cost?

MWh (Megawatt-hour) is a measure of energy capacity (how long the system can continue delivering that power output). For example, a 1 MW / 4 MWh BESS has four hours of storage capacity. So, while the system might be \$200,000 per MW, the effective cost can be \$800,000 per MWh if it has four hours duration.

What happened to the electricity market in the Dominican Republic?

Before 1997, the electricity market in the Dominican Republic was regulated and state-owned. In 1997, the markets were reformed to allow private companies to participate in the generation and distribution of electricity.

What is the largest generator in Dominican Republic?

The largest generator in the country is the private AES Andros with 15.64% of total energy generated, followed by the state-owned Empresa de Generación Hidroeléctrica at 13.62% and Empresa Generadora de Electricidad at 12.08%.<sup>8</sup> The Dominican Corporation of State Electricity Companies (Corporación Dominicana
