This includes benchmark prices for lithium and cobalt, two battery materials that continue to experience market volatility and supply/demand imbalances. Our widely used prices are market-reflective, assessing both the buy- and sell-side of transactions. Trade with relied upon price data that is.

September 8 (SMM) - The SM2601 contract opened at 5,806 yuan/mt and closed at 5,840 yuan/mt, up 0.41%, with the highest price at 5,860 yuan/mt and the lowest at 5,768 yuan/mt. Trading volume reached 138,580 lots, while open interest stood at 322,510 lots. The futures market performed well today.

Figure 1 presents the estimated cost for nickel manganese cobalt (NCM) 811 cells for a 10 gigawatt-hour per year production rate across four different countries. Figure 1 In the first quarter of 2023, NCM 811 cell costs in China were estimated to be 101 dollars per kilowatt hour (kWh) and 110.

The latest data based on EV registrations in over 110 countries show the sales weighted average monthly dollar value of the lithium, nickel, cobalt, manganese and graphite contained in the batteries of the average EV based on global end-user registrations, battery capacity and chemistries. Put it.

NMC refers to NMC111 with equal shares of nickel, manganese, and cobalt. In order to assess the impact of raw material price changes on product prices, it is important to understand the raw material composition of electricity storage technologies. Figure 2 illustrates this for lithium-ion battery.

NMC111 with equal shares of nickel, manganese and cobalt assumed here. Battery pack price of 130 USD/kWh assumed. Values in brackets show baseline raw material cost assumptions based on monthly average prices from 2010-2020.

Can lithiated nickel manganese cobalt oxide be produced by co-precipitation?

A process model has been developed and used to study the production process of a common lithium-ion cathode material, lithiated nickel manganese cobalt oxide, using the co-precipitation method. The process was simulated for a plant producing 6500 kg day⁻¹.

How is lithium nickel manganese cobalt oxide powder produced?

Schematic of a process for the production of lithium nickel manganese cobalt oxide powder. The product stream, a slurry of solid precipitates in a solution, is phase separated, and then filtered and washed several times. The filtration may be done in a rotary vacuum filter followed by drying in a spray dryer.

How much does LME nickel cost?

The latest quote for LME nickel was \$15,150/mt, with a weekly gain of 0.87%. In the spot market, the average price of SMM #1 refined nickel this week was 121,870 yuan/mt, up 1,300 yuan/mt week-on-week.

Why are nickel-metal hydride batteries expensive?

Nickel-metal hydride batteries exhibit relatively high raw material cost due to large amounts of nickel. These batteries are also subject to commodity price fluctuations of nickel, leading to pack cost of 250 USD/kWh in the worst case.

How much will NMC cathode material cost?

This combination of changes indicates the possibility of the NMC cathode material price approaching \$20 per kg, or 19% less than the base case scenario. There are yet other cost-cutting measures that can drive the cost down even further. Fig. 6.
