# Average nickel manganese cobalt battery price per 250kW in Canada

## Overview

---

Lithium nickel cobalt aluminum oxide (NCA) battery cells have an average price of \$120.3 per kilowatt-hour (kWh), while lithium nickel cobalt manganese oxide (NCM) has a slightly lower price point at \$112.7 per kWh. Both contain significant nickel proportions, increasing the battery's energy.

The latest data based on EV registrations in over 110 countries show the sales weighted average monthly dollar value of the lithium, nickel, cobalt, manganese and graphite contained in the batteries of the average EV based on global end-user registrations, battery capacity and chemistries. Put it.

The raw material bill for the contained lithium, graphite, nickel, cobalt and manganese in the batteries of EV sold during the first four months of year climbed to over \$4 billion, even as prices for lithium hydroxide and carbonate continue to set new lows. Chinese LCE prices averaged below \$10,000.

For instance, the article highlights that lithium nickel cobalt aluminum oxide (NCA) batteries have an average price of \$120.3 per kilowatt-hour (kWh), while lithium nickel cobalt manganese oxide (NCM) comes in slightly cheaper at \$112.7 per kWh. These batteries, rich in nickel, offer impressive.

The per kWh price of NCM811 cell is currently the lowest in Greater China due to the low cost of battery materials, thanks to high localization, and the price difference in the manufacturing cost of these cells compared to Europe and North America. However, S&P Global Mobility forecasts a more than.
