ised cost of electricity will become competitive around 2020. Guernsey also has areas with no slack water, so as devices with the ability to 'yaw'¹ are developed a constant power output is possible. One reason for Guernsey's superb tidal stream resource is the fact that it also benefits from one of.

The latest price increase implemented by Guernsey Electricity shows the increasing benefit of investment in self-generation and energy storage technology, according to the green energy experts at The Little Green Energy Company. Simon de la Rue, Head of Sales at the Little Green Energy Company.

The price of electricity will continue to rise as the local electrical infrastructure needs to be extended, bolstered and maintained. The continued investment in renewables will mean higher energy costs as someone has to pay for all this. It either comes out of taxes or the consumer has to pay for.

In Guernsey, we currently rely on fossil-fuel based systems of energy production and consumption and operate a thermal power station. However, it is recognised that as part of the response to climate change, there is a need to transition to an energy mix with limited, if not zero carbon emissions.

In Guernsey, the unit price of electricity has climbed by 17% in the last two years. Earlier this year, Guernsey Electricity warned customers that further increases are expected as the island's agreement with France to import electricity at a fixed cost comes to an end. [i] This has prompted more.

The following report, commissioned by the States of Guernsey Renewable
