Average utility scale ESS price per 100kW in Ukraine

Overview

What are base year costs for utility-scale battery energy storage systems?

Base year costs for utility-scale battery energy storage systems (BESSs) are based on a bottom-up cost model using the data and methodology for utility-scale BESS in (Ramasamy et al., 2023). The bottom-up BESS model accounts for major components, including the LIB pack, the inverter, and the balance of system (BOS) needed for the installation.

How do you convert kWh costs to kW costs?

The \$/kWh costs we report can be converted to \$/kW costs simply by multiplying by the assumed 4-hour duration (e.g., a \$300/kWh, 4-hour battery would have a power capacity cost of \$1200/kW). To develop cost projections, storage costs were normalized to their 2024 value such that each projection started with a value of 1 in 2024.

How much does battery storage cost in Europe?

The landscape of utility-scale battery storage costs in Europe continues to evolve rapidly, driven by technological advancements and increasing demand for renewable energy integration. As we've explored, the current costs range from €250 to €400 per kWh, with a clear downward trajectory expected in the coming years.

Why are battery system costs expressed in \$/kWh?

By expressing battery system costs in \$/kWh, we are deviating from other power generation technologies such as combustion turbines or solar photovoltaic plants where capital costs are usually expressed as \$/kW. We use the units of \$/kWh because that is the most common way that battery system costs have been expressed in published material to date.

What are NREL battery cost projections?

NREL utilizes the Regional Energy Deployment System (ReEDS) (Ho et al.

2021) for capacity expansion modeling, and the battery cost projections developed here are designed to be used in those models. Additionally, the projections are intended to inform the cost projections published in the Annual Technology Baseline (NREL 2024).

How much does a 100 mw/400 MWh installation cost?

For a typical 100 MW/400 MWh utility-scale installation in Europe, hardware and equipment costs currently range from €40 to €60 million. However, these costs are expected to decrease by 8-10% annually as manufacturing efficiency improves and supply chains mature.
