## Overview

What are base year costs for utility-scale battery energy storage systems?

Base year costs for utility-scale battery energy storage systems (BESSs) are based on a bottom-up cost model using the data and methodology for utility-scale BESS in (Ramasamy et al., 2023). The bottom-up BESS model accounts for major components, including the LIB pack, the inverter, and the balance of system (BOS) needed for the installation.

How much does a MWh system cost?

MWh (Megawatt-hour) is a measure of energy capacity (how long the system can continue delivering that power output). For example, a 1 MW / 4 MWh BESS has four hours of storage capacity. So, while the system might be \$200,000 per MW, the effective cost can be \$800,000 per MWh if it has four hours duration.

How much electricity does a person use per capita?

Graph: ELECTRICITY PRICES FOR INDUSTRY AND HOUSEHOLDS (US\$/kWh)  
Per capita energy consumption is around 0.83 toe, a level 35% below the South American average (2021). Per capita electricity consumption is approximately 1 500 kWh.
