Why are energy prices important in Switzerland?

Swiss Federal Office of. energiesdashboard.ch:. Energy prices on the markets are an important indicator of the current market and supply situation in Europe and Switzerland. Supply (production) is combined here with demand (consumption) and ultimately results in a price for a specific energy product. There are markets for different products.

How does Swissgrid calculate grid usage & system service tariffs?

Every year Swissgrid calculates the grid usage and system service tariffs for its services – the operation, maintenance and expansion of the transmission grid. The distribution of costs by Swissgrid takes place according to usage.

How does Swissgrid distribute costs?

The distribution of costs by Swissgrid takes place according to usage. Where this is not possible, the costs are passed on to the distribution system operators and the end consumers at the respective grid level on the basis of meter data for services and energy and corresponding tariffs and billing rates.

How much does a MWh system cost?

MWh (Megawatt-hour) is a measure of energy capacity (how long the system can continue delivering that power output). For example, a 1 MW / 4 MWh BESS has four hours of storage capacity. So, while the system might be

\$200,000 per MW, the effective cost can be \$800,000 per MWh if it has four hours duration.

How will electricity costs be passed on to consumers in 2024?

Where this is not possible, the costs are passed on to the distribution system operators and the end consumers at the respective grid level on the basis of meter data for services and energy and corresponding tariffs and billing rates. In 2024, electricity consumers will also have to pay the costs for the federal government's power reserves.
