## Overview

---

A hybrid Concentrated Solar Power-PV plant with 13 hours of storage is the lowest cost power generation option for low-carbon baseload power in Chile, researchers at the Fraunhofer Chile Research Foundation said in a new report. Are solar PV projects implementing energy storage capacity in Chile?

Operational solar PV projects in Chile are implementing energy storage capacity, with AES Andes reaching COD of a solar-plus-storage project this week. Image: AES Andes.

Can solar power power a Bess plant in Chile?

Both technologies will go hand in hand in Chile, as solar PV is seen as the primary generation source to charge BESS plants, explains Juan Pablo Toledo, country manager, Chile at Metlen Energy & Metals.

Why is solar PV a problem in Chile?

Image: AES Andes. Solar PV in Chile is facing a twofold issue: on the one hand, the ever-increasing curtailment of generation; on the other, the reduction of income due to low prices of electricity with increasing zero marginal cost.

What is the world's largest solar-plus-storage project?

Such is the case of the country's largest solar-plus-storage project from Spanish independent power producer Grenergy and also the world's largest BESS project, according to the company. "Oasis de Atacama will be an iconic project for Grenergy and the entire renewable sector.

How many hours of zero marginal cost in Chile in 2023?

In 2023, there were 2,485 hours of zero marginal cost in Chile, added Rojas. "This is an issue that can be solved by moving the energy to the night." Thus, the importance of implementing BESS capacity in a solar PV project becomes clear.

Should solar storage be included in the design & building phase?

The US added a record 49GW of new solar capacity in 2024, according to figures from the BCSE and Bloomberg New Energy Finance. Even if added later, storage should not be overlooked in the design and building phase when co-locating with solar PV, write Grant Reasor, Joshua Tucker and Dan Rollins Burns & McDonnell.
