

## Global PV Storage Insights

# Commercial energy storage tender price in Korea 2030

## Overview

---

The project is expected to cost about \$725 million (1 trillion won) and will be awarded based on both pricing and non-price factors, such as contributions to domestic industry and battery recycling capabilities.

The project is expected to cost about \$725 million (1 trillion won) and will be awarded based on both pricing and non-price factors, such as contributions to domestic industry and battery recycling capabilities.

What are key drivers in promoting clean energy?

What policy instruments are there to achieve the national RE target 20% by 2030?

How is the energy market structured and who are winning in the market?

What business model proliferates in the market and why?

What are key drivers in promoting clean.

In February 2025, South Korea finalized its biennial master plan, officially known as the "Basic Plan for Long-Term Electricity Supply and Demand (BLPE)" (11th edition). This strategic blueprint sets ambitious targets for renewable energy, aiming for a 21.72% share by 2030 and a more substantial.

In the national 11 th Basic Plan on Electricity Supply and Demand, finalised and confirmed by MOTIE in February this year, South Korea committed to quadrupling installed renewable energy capacity from 30GW in 2023 to 121.9GW by 2038. Interim targets include 55.7GW of solar PV and 18.3GW of wind.

SEOUL, July 21 (AJP) - South Korea is poised to award its first large-scale energy storage system (ESS) tender this week, a 1 trillion won (approximately \$720 million) project that has drawn fierce competition among the country's top battery makers. The outcome could reshape the strategic.

As part of its ambitious energy transition, South Korea is launching a major procurement effort for battery energy storage systems (BESS), seeking to add 540MW of new capacity to its grid infrastructure. This move underscores the country's growing urgency to manage renewable energy intermittency.

The market for battery energy storage is estimated to grow to \$10.84bn in 2026. The fall in battery technology prices and the increasing need for grid stability are just two reasons GlobalData have predicted for this growth, with the integration of renewable power holding significant sway over the.
