In February 2021, France's energy regulator, the CRE, launched its 10th tender for the construction of utility-scale solar PV projects exceeding 500 kW in size, with a total capacity of 700 MW, and is open till 25th June 2021. The French authorities are expected to allocate 450 MW for.

With ambitious targets set for 2030 and beyond, the country is ramping up ground-mounted and rooftop tenders, but faces critical headwinds in permitting, land availability, and price volatility. This article outlines key policy shifts, market segmentation, tender outcomes, and systemic challenges.

France has revised down its solar PV target by 2035 from 100GW to 90GW in its latest Multiannual Energy Programme (PPE3). In the latest draft, which is open to consultation (in French) until April 05, the French government has revised its targets from 75-100GW – set in November 2024 – by 2035 to.

As of 2025, the France Energy Storage Systems Market is valued at a significant scale, with projections to reach USD 22,251 million by 2035, growing at a CAGR of 9.33% from 2025 onward. The battery energy storage systems (BESS) segment, in particular, is thriving, bolstered by technological.

France's solar tender falls short but hits record low costs, prompting policy tweaks to boost participation and meet ambitious 2030 PV goals. The French government's latest rooftop solar tender fell short of its 400 MWp target, with only 278 MW of projects selected across commercial roofs, solar.

TotalEnergies has been awarded 62 megawatts (MW) of ground based solar projects in the PPE2 call for tenders issued by the French Energy Regulatory

Commission (CRE), strengthening its position as a leader in renewable energies in France. The nine proposals presented by TotalEnergies were accepted. What is the future of solar energy in France?

Increasing demand for clean energy sources is one of the primary drivers for the solar energy market in the country. The solar power capacity is set to continue expanding with a target of around 18–20 GW installed by 2023. In 2021, France's solar PV installed capacity accounted for more than 14.71 GW.

How many solar tenders will France launch a year?

According to the draft, France will launch 2 calls/year for ground-mounted solar PV plants with 1 GW capacity sought each year, starting from H1 2025. For rooftop solar, it will launch 3 tenders/year with 300 MW capacity each. A technology-neutral tender will also be launched every year for a total of around 500 MW.

How many solar panels will France have by 2030?

In the latest draft, which is open to consultation (in French) until April 05, the French government has revised its targets from 75-100GW – set in November 2024 – by 2035 to 65-90GW. By 2030, the country expects to reach 54GW of installed solar PV.

How much solar power will France have in 2023?

The solar power capacity is set to continue expanding with a target of around 18–20 GW installed by 2023. In 2021, France's solar PV installed capacity accounted for more than 14.71 GW. Solar PV has over 24.71% share of the total renewable energy mix. This is due to increasing projects on solar energy across the country.

How is France preparing for a solar project?

To meet these targets, France will rely heavily on structured tendering procedures. Beginning in the first half of 2025, the government plans to launch two annual tenders for ground-mounted solar projects, each awarding 1 GW of capacity. In parallel, three rooftop solar tenders per year are scheduled, with each round targeting approximately 300 MW.

How much solar power does France have?

Last year, the country added 4.7GW of solar PV, which puts it closer to the

new annual target set for 2025 than the previous one set at 3GW. Utility-scale installations represent more than half of the operational solar parks in France, with 54%. Of that percentage 38% is for ground-mounted solar PV and 16% for rooftop PV.

Factory solar storage tender price in France 2030

Government incentive schemes in France

Government plans France has an ambitious objective: to become Europe's first major decarbonized economy by achieving carbon neutrality by 2050. Reducing the impact of ...
