# Hybrid solar inverter tender price in Luxembourg 2030

## Overview

---

How much solar power will Luxembourg have by 2030?

While the W/capita remains overall in line with the EU average, at 1,578 W/capita, this target remains below SolarPower Europe's Medium Scenario projection to 2030, whereby Luxembourg operates a 1.5 GW solar fleet by 2030. The plan provides no breakdown between ground-mounted and rooftop PV.

What is a solar PV tendering scheme?

In this tendering scheme, different maximum capacities are awarded, depending on the technology (wind, biomass, solar), size, and application (ground-mounted, rooftop, floating). The ranking in the scheme is based on EUR per ktCO<sub>2</sub> avoided. In 2023, for the first time ever, the Dutch solar PV sector achieved average negative subsidy levels.

How much solar power will Germany have in 2030?

This results in almost 2.6 kW/c in 2030, the highest score across EU Member States. This target is aligned with SolarPower Europe's Medium Scenario projection to 2030, whereby Germany, driven by its high annual installation targets, reaches a solar fleet of 232 GW.

How big will solar PV be by 2030?

When it comes to solar PV, however, the ambition remains the same, with 1.1 GW of installed capacity by 2030. This is justified in the plan by the challenge posed by the disruption of supply chains in PV installations.

Is the demand for solar PV still soaring in 2023?

The demand for solar PV in the beginning of 2023 was still soaring, as many orders placed in 2022 only came to realisation in the course of 2023. However, compared to the peak of the crisis in 2022, the price of electricity has lowered significantly throughout 2023.

How much do PV subsidies cost in 2022?

In particular, PV subsidies were considerably increased by the government with the publication of the EAG, rising from around 110 million EUR in 2021 to 300 million EUR in 2022, and have grown further to 600 million EUR in 2023. In addition, as part of the EAG, a market premium for PV systems (CfD scheme) has been created to deploy 700 MW per year.
