Overview

How much will lithium ion batteries cost in 2025?

Research firm Fastmarkets recently forecast that average lithium-ion battery pack prices using lithium iron phosphate (LFP) cells will fall to US\$100/kWh by 2025, with nickel manganese cobalt (NMC) hitting the same threshold in 2027.

What is the global lithium iron phosphate battery market size?

The global lithium iron phosphate battery market size was estimated at USD 8.25 billion in 2023 and is projected to reach USD 17.48 billion by 2030, growing at a CAGR of 10.5% from 2024 to 2030.

Will lithium-ion battery price decrease through 2050?

The national laboratory is forecasting price decreases, most likely starting this year, through to 2050. Image: NREL. The US National Renewable Energy Laboratory (NREL) has updated its long-term lithium-ion battery energy storage system (BESS) costs through to 2050, with costs potentially halving over this decade.

Are lithium-ion batteries the future of electric vehicles?

Lithium-ion batteries (LiBs) are pivotal in the shift towards electric mobility, having seen an 85 % reduction in production costs over the past decade. However, achieving even more significant cost reductions is vital to making battery electric vehicles (BEVs) widespread and competitive with internal combustion engine vehicles (ICEVs).

What is the market size of LiFePO4 batteries in 2023?

Based on application, the market is categorized into portable and stationary. The portable application segment dominated the global market and accounted for more than 50.0% share of the overall revenue in 2023. This is attributed to the high demand for LiFePO4 batteries from the automotive segment, which is

a key demand-generating segment.

Are LiFePO₄ batteries a good alternative energy storage system?

On account of high energy density and long cycle time, LiFePO₄ batteries are projected to be the most favored choice as an alternative energy storage battery system. Therefore, growth in demand for automobiles across countries, such as China, is projected to fuel demand for LiFePO₄ batteries.
