# Microgrid storage cost vs benefit calculation in Ecuador

## Overview

---

Are microgrid systems feasible?

The results indicate that microgrid systems are feasible to implement, as they are shown to be capable of supplying electricity to entire communities. In addition, the microgrid system with the lowest net present cost (NPC) is Wind/PV with 75 k\$, but the cost of energy (COE) is the highest at 1.41 \$/kWh.

Why do we need a microgrid?

The use of microgrids is becoming increasingly widespread, as they can be implemented independently of location and according to the energy resource available in each area. They also provide a reliable, efficient and clean supply of electricity.

What is a microgrid system?

The microgrid system, being an isolated system, requires batteries to store the energy produced and maintain it for use. of charge. Fig. 12. Battery array charging, Wind/PV microgrid. microgrid system are presented in T able III. TABLE III. B IOMASS/PV MICROGRID SYSTEM COST production [MWh] in Fig. 13. It can be seen that the highest.

Which microgrid system has the lowest net present cost (NPC)?

In addition, the microgrid system with the lowest net present cost (NPC) is Wind/PV with 75 k\$, but the cost of energy (COE) is the highest at 1.41 \$/kWh. In contrast, the Biomass/PV microgrid system has an NPC of 382.71 k\$ and a COE of 0.49 \$/kWh. Therefore, the system to be implemented will depend on the energy needs of the area.

How much energy does a biomass/PV microgrid produce?

In contrast, the Biomass/PV microgrid system has an NPC of 382.71 k\$ and a COE of 0.49 \$/kWh. Therefore, the system to be implemented will depend on

the energy needs of the area. Daily, monthly and annual load profile of a rural community on Isabela Island. Energy production [MWh] per month by generation system, Wind/PV microgrid.
