

## Global PV Storage Insights

# PV energy storage cost breakdown in Germany 2026

## Overview

---

How much battery storage will Germany have in 2026?

Industry body the Bundesverband Solarwirtschaft (BSW-Solar) expects around 7 GWh of large-scale battery storage to be added during that period. From ESS News German solar trade body BSW-Solar expects the capacity of large battery storage systems installed in Germany to increase fivefold by 2026.

Are rooftop PV systems paired with battery storage in Germany?

In 2019, 46% of all commissioned residential rooftop PV systems had already been paired with battery storage systems. Remarkably, this share surged to 77% in 2023, indicating a significant upward trajectory of the trend toward combining PV residential rooftop systems with battery storage in Germany.

How much does Germany spend on EV and stationary battery research?

Public research and development incentives for EV and stationary battery research amount to between EUR 80 million and EUR 85 million every year. As the European lead market in the energy transition age, Germany provides the opportunity for companies to develop, test, define and market new energy storage solutions.

Is Germany a good place to invest in energy storage?

While the demand for energy storage is growing across Europe, Germany remains the European lead target market and the first choice for companies seeking to enter this fast-developing industry. The country stands out as a unique market, development platform and export hub.

How many home storage systems were installed in 2024?

Enervis found 1.51 million home storage systems were installed by the end of June 2024, with a total capacity of around 13 GWh, and around 1.1 GWh of commercial battery storage capacity was also present, for just under 16 GWh of storage capacity in Germany at the end of June. Will PV capacity increase in 2026?

The anticipated annual PV capacity increase published by the Federal Ministry for Economic Affairs and Climate Action (BMWK) demonstrates a linear growth path to 2026, after which it stabilizes at 22 GW for subsequent years. The expansion is intended to consist of a roughly fifty-fifty distribution of ground-mounted systems and rooftop systems.
