Sodium ion battery storage EPC turnkey quotation per 30kWh 2025

Overview

Are sodium-ion batteries the future of energy storage?

Sodium-ion batteries are being leveraged across multiple industries. Utility companies are at the forefront of their deployment, as demonstrated by HiNa Battery's 100MWh energy storage project. These batteries provide an affordable alternative for renewable energy grid storage, helping stabilize energy supply.

Are sodium-ion batteries competitive?

As of 2025, sodium-ion batteries are well-positioned to achieve cost parity with lithium-iron-phosphate (LFP) batteries, a key milestone for market competitiveness. With ongoing innovations and substantial investments, their adoption in energy storage systems, renewable grids, and budget EVs is expected to soar in the coming years.

Can sodium-ion batteries achieve cost parity with lithium-iron-phosphate (LFP) batteries?

Their research focuses on achieving greater energy density and reducing costs, further accelerating the adoption of this promising technology. As of 2025, sodium-ion batteries are well-positioned to achieve cost parity with lithium-iron-phosphate (LFP) batteries, a key milestone for market competitiveness.

What is a sodium ion battery?

This material delivers impressive energy density and stability, promoting scalability for both grid storage and EVs. The second-generation sodium-ion batteries introduced by Contemporary Amperex Technology Co., Limited (CATL) achieve energy densities of up to 200 Wh/kg, a significant improvement from earlier versions.

When will CATL start manufacturing a second-generation sodium-ion battery?

CATL plans to commence large-scale production of its advanced second-generation sodium-ion batteries in 2025. HiNa has already developed a versatile range of cylindrical, prismatic, and blade cells tailored for different applications.

What is a second-generation sodium-ion battery?

The second-generation sodium-ion batteries introduced by Contemporary Amperex Technology Co., Limited (CATL) achieve energy densities of up to 200 Wh/kg, a significant improvement from earlier versions. These batteries also remain operational in extreme temperatures, as low as -40°C .
