Successful bid price of mobile ESS unit project in Ireland 2026

Overview

The auction clearing price was €83,050 per MW per year. A total of €698 million of capacity payments will be paid to generators who were successful in this auction. How much will ESS project cost in 2024?

Commercial operation of the ESS project will begin in central Ireland in October 2024 and will cost 122.5 million USD to develop. Prime Minister (Taoiseach) of Ireland, Micheál Martin (left), and CEO of Hanwha Energy, In-sub Jung (right), at an event for ESS project investors held in County Offaly, Ireland on September 6.

How much money does ESB Networks need to invest in PR6?

In the baseline investment proposal, ESB Networks is seeking €10.2 bn revenue to support the increased investment needed in PR6, while continuing to deliver financial metrics in line with a strong investment grade credit rating. A financeability report accompanying this plan has been submitted to the CRU.

How many applications will ESB Networks process during Pr5?

During PR5, the number of Microgeneration applications processed by ESB Networks rose rapidly, from around 7,100 in 2021 to 33,000 in 2023. We expect that the total number of applications will exceed 40,000 this year. To date, c600 MW of rooftop solar has been installed across more than 100,000 individual installations.

How much is the proposed investment scenario outlined in PR6?

The total value of the proposed investment scenario outlined in this plan amounts to €13.4 bn. Taking into consideration the uncertainty and the possibility that some of these costs may not materialise as expected in PR6, we are proposing a baseline investment programme of €10.1 bn.

How many renewable projects will connect to the distribution system during PR6?

We anticipate that 4.4 GW of utility-scale renewable projects will connect to the distribution system during PR6, 1.6 GW of which was already contracted in PR5. This equates to approximately 236 projects, made up of approximately 59 x 38 kV connections and 177 x connections at MV level.

How can ESB Networks estimate the cost of equity?

Use of the capital asset pricing model (CAPM) methodology to estimate the cost of equity. ESB Networks is proposing a real, pre-tax WACC of 4.23%. Including some headroom in the WACC allowance, through aiming up, is appropriate in order to account for:
