

## Global PV Storage Insights

# Successful bid price of solar with battery project in Serbia 2026

## Overview

---

The contract is valued at approximately 5.5 million euros, with the deadline for applications set for 5 May. How many MW of battery storage will be developed in Serbia?

Up to 200 MW of battery storage will be developed across the sites. Image: Ministry of Mining and Energy, Tanjug Plans for 1 GW of new solar in Serbia are set to go ahead after the signing of an implementation agreement.

Where will solar power be installed in Serbia?

The Ministry of Mining and Energy and EPS (Elektroprivreda Srbije) partnered with Hyundai Engineering and UGT Renewables to drive this project. Serbia will soon see six large solar plants strategically positioned across the country. Key locations include Negotin, Zaječar, and Bošnjace.

What does a solar project mean for Serbia?

For Serbia, this project means more than just meeting renewable energy goals. It promises energy independence, economic stability, and a sustainable energy supply. By creating a network of self-balancing solar plants, Serbia strengthens its energy security, attracts green investments, and aligns with global environmental standards.

When will a solar project start in Serbia?

This process ensures the project respects Serbia's cultural and natural landscape. Hyundai Engineering and UGT Renewables will start construction in 2025. By 2027, the first solar capacities are expected to be online. The entire project will likely complete by mid-2028.

How will solar energy impact Serbia?

The project's expected output is 1,600 GWh annually, meeting significant energy demands for households and industries alike. Currently, over 60% of Serbia's electricity comes from fossil fuels. Solar energy offers a practical,

scalable solution for diversifying energy sources.

How many solar plants are there in Serbia?

Serbia will soon see six large solar plants strategically positioned across the country. Key locations include Negotin, Zaječar, and Bošnjace. Together, these sites will provide 1 GW of solar energy capacity. Each plant will also have advanced battery storage systems totaling 200 MW, ensuring stable electricity flow across the national grid.
