130kWh 60kW

## Overview

---

Selection of consulting firm for designing of Battery Energy Storage System (BESS), implementation & supervision under MCEP(Dhaka-Mymensing Division) project in BREB.

Selection of consulting firm for designing of Battery Energy Storage System (BESS), implementation & supervision under MCEP(Dhaka-Mymensing Division) project in BREB.

Selection of consulting firm for designing of Battery Energy Storage System (BESS), implementation & supervision under MCEP(Dhaka-Mymensing Division) project in BREB. The main objectives of the Assignment: To Increase reliability and quality of power supply. To Peak load management. Minimum power.

Bangladesh has made some progress over the last two decades in expanding its renewable energy capacity, but still has significant untapped potential. As an example, as of 2024, renewable energy accounts for only 4.5% of Bangladesh's total installed power capacity of 22,215 MW, with solar power.

The Ceylon Electricity Board (CEB), Bangladesh's state-owned power utility, has launched a competitive bidding process for large-scale battery energy storage system (BESS) projects aimed at stabilizing the national grid as more intermittent renewable sources come online. According to the request.

For example, the study found a single 300MW/400MWh battery energy storage system (BESS) in the region of Mymensingh, a city in north-central Bangladesh could reduce load management costs by US\$200,000 per day or US\$71.3 million a year. The region's average load shed is increasing, with 60MW of load.

Why Energy Storage?

Thank You. .

Despite government claims of 10,000 MW renewable energy projects in

various stages of implementation, a Power Cell document indicates that only 4,000 MW worth of projects are fully planned by 2030. According to the Sustainable and Renewable Energy Development Authority (SREDA), Bangladesh currently.
