

## Global PV Storage Insights

# Turnkey off grid solar storage EPC contract price in Korea

## Overview

---

The project is expected to cost about \$725 million (1 trillion won) and will be awarded based on both pricing and non-price factors, such as contributions to domestic industry and battery recycling capabilities. Will EPC contracts provide for the handover of a solar facility?

EPC Contracts will not provide for the handover of the solar facility to the Project Company, and the PPA will not become effective until all commissioning and reliability trialling has been successfully completed.

Should you choose an EPC contract for a solar project?

Given the significant monetary value of EPC Contracts, and the potential adverse consequences if problems occur during construction, the lowest price should not be the only factor used when selecting a Contractor. As noted earlier, an EPC Contract is one of a suite of agreements necessary to develop a solar project.

What are the benefits of an EPC contract?

As noted previously, one of the advantages of an EPC Contract is that it provides the Project Company with a fixed completion date. If the Contractor fails to complete the works by the required date, it is liable for DLDs. However, in some circumstances the Contractor is entitled to an extension of the date for completion.

Why should a project company invest in a solar facility?

- Performance guarantees: The Project Company's revenue will be earned through the operation of the solar facility. Therefore, it is vital that the solar facility performs as required in terms of output, efficiency and reliability.

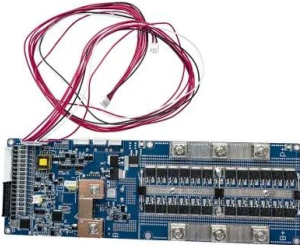

Should a solar project have a guarantee test?

In some projects, the guarantee tests occur after handover of the solar facility to the Project Company. This means the Contractor no longer has any liability

for DLDs during performance testing. In our view, it is preferable, especially in project-financed projects, for handover to occur after completion of performance testing.
